

Introduction of HTML Tags : by Gagan Baghel

Tags

- Tags define the structure and content of a webpage, enclosed in angle brackets (`< >`).
- Tags are the reserved keyword in the html that are enclosed inside the angle brackets.

Examples of Tags

1. Headings (`<h1>` to `<h6>`)

Defines headings from largest (`<h1>`) to smallest (`<h6>`).

Example:

```
<h1>Main Heading</h1>
```

```
<h2>Sub Heading</h2>
```

2. Paragraph (`<p>`)

Defines a paragraph.

Example:

```
<p>This is a paragraph.</p>
```

3. Images (`<img>`)

Used to add images.

Syntax:

```

```

`src` : Specifies the image source.

4. Links (`<a>`)

Used to create hyperlinks.

Syntax:

```
<a href="URL">Link Text</a>
```

`href` : Specifies the link destination.

We have 2 Types of Tags In HTML

1. Paired / Container tags : taht have opeing and closing Tags
 - a. Examples : `<h1>` `</h1>` , `<p>` `</p>` etc.,
2. UnPaired / un-Container tags : self Closing tags
 - a. Eamples : `<img />` , `<br/>` , `<hr/>` etc.,
